DETAILED ACTION

The Group and/or Art Unit location of your application in the PTO has changed. To aid in correlating any papers for this application, all further correspondence regarding this application should be directed to Group Art Unit 1656.

Election/Restriction

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-8, drawn to a method of analyzing a target nucleic acid by applying a nucleic acid amplification reaction involving a primer, a labeled substrate molecule and nucleic acid synthase and analyzing the target nucleic acid which is determined by measuring the signal from the marker molecule, evaluating mobility of the labeled molecule and quantifying the target nucleic acid based on the evaluation results, classified in class 435, subclass 91.2.
 - II. Claims 9-17, drawn to an apparatus of analyzing a target nucleic acid by applying a nucleic acid amplification reaction, classified in class 422, subclass 131.
 - III. Claims 18-38, drawn to a method of quantitatively analyzing a target nucleic acid molecule involving two primers which are complementary to discrete nucleotide sequence regions of the target nucleic acid molecule, classified in class 435, subclass 91.2.

Art Unit: 1656

2. The inventions are distinct, each from the other because of the following reasons:

Inventions I, II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions Group I is drawn to a method of analyzing a target nucleic acid by applying a nucleic acid amplification reaction involving a primer, a labeled substrate molecule and nucleic acid synthase, Group II is drawn to an apparatus of analyzing a target nucleic acid and Group III is drawn to a method of quantitatively analyzing a target nucleic acid molecule involving two primers which are complementary to discrete nucleotide sequence regions of the target nucleic acid molecule. Thus, they have different modes of operation, different functions, or different effects.

3. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II and III, restriction for examination purposes as indicated is proper.

4. A telephone call was made to Mr. Barth Richard on 2/24/2000 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Sequence Rules

Art Unit: 1656

5. This application contains sequence disclosures that are encompassed by the definitions for nucleotide and/or amino acid sequences set forth in 37 CFR 1.821(a)(1) and (a)(2). However, this application fails to comply with the requirements of 37 CFR 1.821 through 1.825 for the reason(s) set forth on the attached Notice To Comply With Requirements For Patent Applications Containing Nucleotide Sequence And/Or Amino Acid Sequence Disclosures.

Additionally, all nucleic acid sequences in the specification are required to have SEQ D NO, for example, the nucleic acid sequence on page 48.

APPLICANT IS GIVEN THE RESPONSE PERIOD SET FORTH IN THIS OFFICE ACTION WITHIN WHICH TO COMPLY WITH THE SEQUENCE RULES, 37 CFR 1.821-1.825. Failure to comply with these requirements will result in ABANDONMENT of the application under 37 CFR 1.821(g).
